Hi, new to this group, also new to web site design. I hope anyone give me some help about test website on computer based on windows xp pro. when I browsed my pages, it always say 'web server' or 'frontpage server extension' have problem. I installed frontpage 2003, installed frontpage server extension 2002 from the os cd. How can I have a web server for xp, or check the frontpage server works well?

Thanks

.
