When I attempt to map a FP2003 form field to a SQL database column I receive the following error message:

"The type of field "additional_notes" does not match the type of column "additional notes" in the database. Modify the field mapping or change the validation settings on the form field." Additional notes is just one of many fields for which I receive the error. Some are text, some numbers. Originally I had all the fields set to No Constraints.

I've tried changing the entry type from No Constraints to Text, as well as making the field data length required or not without success.

Thanks in advance,

Ed

.
