I created a database on a SQL server manually and matched the column names to mirror the fields in the FrontPage (FP) form.

I was able to establish a network connection between the FrontPage form and the SQL database. Remember, I didn't use the FrontPage (FP) form database wizard to create the SQL database.

If you open the validation window for any FrontPage (FP) form field you get the option to change the data type to either "No Constraints, Text, Number, or Integer."

Psychotropic medication might help you! If you don't remember the 60s you may be having acid flashbacks.
