Hi Arthur,

Unless you're developing on a server OS it's hard to use include virtual as the path will be different on your production and dev machines. Say you're working on <http://localhost/yourweb> and you have an include virtual pointing to /somefile.asp the include will be looked for <http://localhost/somefile.asp> which is what I'd guess is happening with you. Try changing you include file and you should be back in business.
