Thank you for responding.

The site is at <http://www.mcateerealty.com/>

It can be any given button on any page in site at any point. I made buttons via interactive button feature. Usually, I get the highlight color with mouseover but then it's as if the button doesn't change out to next step & get "blank" and/or partial view of what should see with next button prior to the new page appearing. The site/buttons had been working fine until this past weekend. Now, it's as if things are very sluggish & the buttons aren't changing out like they use to do but I can't seem to discover why the change.

Suggestions on what to check next is appreciated. Thanks again.
