Can't be done using the FrontPage search component. You will have to either write your own search engine (or find one using your favourite Internet search engine), or live with the restrictions imposed by the FP component.

There is an ASP web search at

[http://www.webwizguide.com/asp/sample\\_scripts/site\\_search\\_script.asp](http://www.webwizguide.com/asp/sample_scripts/site_search_script.asp) which may be suitable for small, non-database driven, sites.
