Hi all,

I've posted this to the ASP forum at [outfront.net](http://outfront.net) with no substantive responses, so I'm hoping this group will prove more helpful.

Using FrontPage 2003, ASPSmartUpload, ASPMail, and the filesystemobject, I've created a form that accepts user input and multiple file uploads, obtains a job number from a file, returns a confirmation page with a job number to the user, and emails the form data, the job number, and information about the uploaded files to a service bureau employee. The form page points to an .asp file that contains both the script and the html for the confirmation page. I'm using VBScript.

For the most part it works very well, but now we'd like to get fancy.

Currently, when a user clicks on the "submit" button on the form, there is no visual feedback for him/her except the slow progress bar in the browser to indicate that the upload is progressing. Consequently, some users repeatedly click the "submit" button. Ouch.

What I'd like to do is change the screen immediately once the "submit" button has been activated so that a) users get some visual feedback and b) they are prevented from re-activating the "submit" button.

Ideally, the header of the confirmation page would be displayed, and underneath it a simple message indicating that the file upload is in progress, yadda yadda yadda. Once the upload was complete, the file upload message would disappear to be replaced by the confirmation information.

How can I achieve this?

Thanks in advance,  
KEW
