It really has nothing to do with FP.

If you want to do virtual tours of rooms/whatever, you need to find software that will do this for you on your web. Do a google search for that. And you'll have to make sure your host supports whatever software you buy to create the tour.

| Thank you, Tom. Canon Support said "you will have to contact the maker of
| the Microsoft FrontPage software for assistance". So I'm stuck between
| two

| vendors who point to each other. I have seen real estate web sites that
| routinely include these virtual views of rooms. I wonder how they do that
| on their web site? Proprietary software, using another web development
| tool? I can only hope that someone has solved this problem for users of
| A530 cameras.

| Your question is not related to FrontPage programming. Try asking support
| at Canon.

| I just bought a Canon PowerShot A530 digital camera. I chose it because
| it

| is inexpensive and has an "auto-stitching" function. This feature, when
| used with the included software, makes the process effortless. I can
| stand

| in the center of a room and use the "stitch assist" feature to see a

Re: Canon PowerShot A530 stitching question

little

| of each prior picture to align the new picture with the prior picture.

Then

| the software automatically corrects my slight mis-alignments and make one
| panoramic picture of the room. It also has a 360 degree feature, that

| creates a virtual view of the room, so I can use the mouse to rotate left

or

| right as if I'm standing in the room and looking around. The software

that

| supports that virtual view is part of the Windows software that Canon

| includes. I want to be able to support the same feature on my web site,

| using FrontPage 2002. Can I accomplish this? How? Thanks in advance for

| any help. And please have patience with my excessive descriptions of the

| features. No, I don't own any Canon stock – I just really like this

camera.
