Bill Wrote:

While some of the pages on my website contain a proper title, others simply show as "untitled" . I have done what the help file says, right click etc. and fill in the TITLE box and saved everything. Yet, some pages accept it and others do not. Any suggestions....? Thanks

It's hard to say what the problem may be.... when you "fill in the TITLE box"... is that in "page properties"? and when you "save" it... do you go back and open the page again to see that is is really saved (in FP)?

After saving... the page needs to be uploaded to you website host too.
