The CSS variant is supported only by Mozilla & Opera. Older versions of IE I believe supported the <blink> tag

Some browsers do the tag, others do the style, most don't do it- no one really likes it

I suppose one could always try <blink>Blinky Text</blink>

Article--> <http://www.domedia.org/oveklykken/css-blinking-text.php>

I agree

Luckily it doesn't work in most modern browsers. It is distracting that something blinks on a page. Irritates most people after the first couple of seconds.

If you absolutely will use it (it is your own customers you scare away) the correct way is using CSS, text-decoration: blink.

Regards Jens Peter Karlsen.

Hi,

What is the HTML to make a word blink/flash? i have tried <blink> but apparently this does work in Internet Explorer!

Re: Blinking words

any suggestions?

thanks.
