3D Minefield is a 3D minesweeper game, it is a refreshing concept of the old minesweeper game. It is a challenging game of strategy and luck, taking its players to the wonders of 3D environment. The game is based on the classical minesweeper game with adjustable parameters that

allow you to change and complicate the game. Changing the classic two-dimensional game to an original three-dimensional game has added to

the playability without changing the basic game logic.

To play 3D Minefield:

1. You can uncover a cube by clicking it. If you uncover a mine, you lose the game.
2. If a number appears on a cube, it indicates how many mines are in the six cubes that surround the numbered one.
3. To mark a cube you suspect contains a mine, right-click it.
4. If you are uncertain about a cube, right-click it twice to mark it with a question mark (?). Later, you can either mark the cube as a mine

or remove the markings by right-clicking the cube again once or twice.

5. If you have marked all the mines around a numbered cube, you can uncover the remaining cubes around it by clicking the numbered cube with the left and right mouse buttons simultaneously. If not all mines surrounding the numbered cube have been marked, the remaining covered or unmarked cubes will flash when the numbered cube is clicked with both buttons simultaneously.

Controls:

In this game, you can operate a camera that allows you to survey the playing field by keyboard.

- W or UP --- rotate up;
- S or DOWN --- rotate down;
- A or LEFT --- rotate left;
- D or RIGHT --- rotate right;
- Z --- zoom in;
- X --- zoom out;
- ESC --- quit.
