Booster,

When you are talking about Interenet, you cannot connect direct, however when there is the possibility of aspnet on the server where is the database, you can maybe use webservice.

<http://msdn.microsoft.com/library/default.asp?url=/library/en-us/vsintro7/html/vbwlkCreatingDistributedWebApplicat>

When it is about a normal internet you can just tell where the database is.

I hope this helps?

Cor
