Date: Mon, 29 Nov 2004 01:23:05 -0800

Hallo,

als ich neulich bei einem Kunden versucht habe, das Exchange 2003 Service Pack 1 auf einem deutschen Exchange 2003 Frontend Server zu installieren, wurde mir die Installation mit folgender Fehlermeldung verweigert:
"Vor dem Installieren von Microsoft Exchange Server Service Pack muss Exchange Server 2003 auf diesem Computer installiert sein."
Selbstverstaendlich ist der deutsche Exchange Server 2003 installiert, auch das notwendige Hotfix fuer die Service Pack Installation ist schon drauf. Das Studium des Installationslogs hat zumindest etwas Licht ins Dunkel gebracht, als dass offensichtlich ein "Versionskonflikt" vorliegt. Da die Infrastruktur vor einem Jahr von Exchange 5.5 auf 2003 migriert wurde, koennte es sein, dass in der Registry und/oder im Active Directory noch alte Versionseintraege zurueckgeblieben sind. Hat jemand aehnliche Erfahrungen gemacht, bzw. weiss jemand Rat, wie ich dieses Problem loesen koennte? Im Anschluss habe ich das Logfile dieses Installationsversuchs angehaengt...

MfG, Axel.

Installationslog:

```
[09:06:45] ***** Beginning Setup run *****
