Hello, I am an ICT Network Manager at a school in England. We have ISA 2000 installed.

I also cannot get the ftp out from any machine bar the server. If i use the program on the server its fine I can FTP the school web site however if i try to use any other computer the report says unable to locate www. etc.

I have rang support and they say check the ftp, ftp server boxes on the allow list. i have done this but it still cannot connect to the site.

I am really stuck and I dont know what to do. i dont really know anything about ISA as the school just bought it with out giving me any training as of yet. Any help would be most appreciated.

is my email please feel free to email me any suggestions!

Hope some one can help

Best Wishes

Miss Catherine Boyd
