If adding the FTP protocols does work, you should be able to remove the FTP Download and FTP Server and just leave FTP enabled because you don't want them hosting a FTP server :) But no harm in trying it with all enabled for the time being.

That should hopefully resolve your problem in the short term. I'm not sure how large your school is but as a long term plan you may want to consider rolling out the ISA Client to give you better control of who has access to certain services and protocols. There are a number of documents which cover rolling out the client, and if you have a reasonably straight forward network layout little configuration would be required.

Hehe I just finished in my degree in June as well, BSc(Hons) Computing with Operational Research. I was at Leeds University, where did you study ?

> *Thanks for all your help so far*

No problem, glad to help.
