With ISA you cannot controll outgoing traffics IP Address. Outgoing traffics will always be from the first IP Address in the external interface.

I am trying to figure out where I define what IP address SMTP traffic is "sent" from.

In other words I want all email from my exchange server to be sent from 1 public IP address, and I cannot for the life of me figure out where to configure this option.

ISA 2004 Standard configured as an Edge firewall
