Whenever i ping my vpn server by netbios name it returns thr external interface ip. Is this right ? Internal interface can be pinged. I can access the vpn server using \\netbiosname.

make sure you are using a full range, till 255 or u will start having error message in ISA Alerts.

Hi,

When i am using static addressing for VPN Client i prefer to

Re: VPN problem

assign
them
an
IP range used from the Internal Network that is as follows:

make your Internal Network Range :

192.168.1.0 – 192.168.1.240
192.168.1.250 – 192.168.1.255

and your VPN Internal Range :

192.168.1.241 – 192.168.1.249

HTH,
Tarek

Can login and can ping vpn server ip but
cannot access using netbios
or
fqdn. I've set it to use wins and dns in my
internal network but still
same.
The ip address is static assign. Eg,
192.168.2.x but the internal
network
ip
address is 192.168.1.x . Does this works ?

Re: VPN problem

can they ping by IP ?? or
FQDN ???
