I looked at the log files but do not see anything that pertains to pop3 (110). I looked in all 3 types of log files. Now, it does not seem to be real time as I tried to connect via pop3 but did not see an error. Are the realtime logs somewhere else?

Also, I want to confirm I have pop3 configured correctly, is there a doc available to explain how to config to allow outside users to access mail via pop3 through an isa2k?

Bret

you can configure ISA2k log files types and also view them by :
servers and arrays \server name\monitoring and configuration\logs.

Our "external router" is a cable modem set to bridge mode so it should not be blocking anything. I have also checked with our ISP and all ports are open so they are not blocking anything.

Where does ISA write their log files.

check your external router to ascertain that pop3 will not be blocked
out

Re: Access POP3 through ISA2000

there.see isa log files and write us some filtering errors if there are.

I have a SBS2000 box that I need to allow an outside client to get their mail via pop3. I have the POP3 service running and verified via telnet that it works internally. I am unable to connect externally via telnet. I have configured ISA to allow POP3. I have tried to custom configure an incoming IP Packet Filter and used the ICW to to allow incoming POP3. Neither allowed incoming POP3. I also created a custom POP3 protocol rule to allow POP3. Still cannot connect. I used the following paper from MS as a guide
ISA Server 2000 Feature Pack 1
Publishing POP and IMAP Services Using Microsoft ISA Server

thanks
