Now I am having a WIN2k AS and ISA server configured to enable accessing the internet VIA ISDN Modem And It Works Nice.

But recently I have added a new internet leased line (i.e the leased line is fixed to a router's port) so I need to know how to configure the ISA to access the web VIA the leased Line.

also I have a user who needs only to access a specific web Site ,so I need to limit (specify only some sites to be accessed with a specific user and prevent him from accessing any other sites not included in a specific list)

help will be too much required

Best Regards:-
Ahmed Nour
