Make sure the internal DNS registrations are correct for this machine.  
Do you maintain a reverse-lookup zone in your internal DNS?

Part of the validation process is to locate the machine in AD.  
This requires a reverse-lookup to ensure that the machine records in AD are correct.

When attempting to install the ISA Server Enterprise configuration on a Win 2003 member server wh  
we receive this error message: "the computer is not part of any site defined in Active Directory  
to add the ISA Server to an Array and it will be installed as a stand alone server. Do you want t  
Note: Have already run the ISA Enterprise installation AND all Service Packs are up to date on  
If we inital the "Stand Alone" configuration, does this make the 2003 Member Server an "Enterpri  
something we have missed?
