sorry

this doesn't works

I continue to see the ISA server error.

My IE configuration for my client computer:

Autonatic configuration checked

other option not checked.

I've also tri to force the IE proxy config to ignore the *.domain.com

but this doesn'T works more.

In ISA Server 2004, in the monitor tab, I see my request which is denied

(last rule in the firewall config), so my listerner doesn't listen and

doesn't see my query.

My Firewall policy is configured like this:

* Listener: port HTTP 80 / All protected network only

* From tab: All protected network only

* To: internal

* Users: Spcific authorized group

* Bridging: Http / 80

I've a second rule for the same targeted domain, but this rule listen the HTTPS port and available to external users onyl, and this rule works fine from out of my local network.
