Yes, you can use a third party RADIUS server for authenticating VPN users with ISA 2004. IAS (the Microsoft RADIUS service) is just one example of RADIUS deployment. You can read all about using RADIUS for authenticating incoming VPN connections in the Using RADIUS Authentication for ISA Server 2004 VPN Remote Client Connections solution document at <http://www.microsoft.com/technet/prodtechnol/isa/2004/plan/isaradiusremote.mspx>
