Here's what my setup looks like:

- * DC connected to switch (LAN);
- * VPN Server connected to switch (LAN) on first NIC / Cconnected to firewall device (Internet) on second NIC.

Is this the correct basic setup? If so, what do I need to do so that the VPN server can access the Internet and the client computers know to go through the VPN server for Internet access?

Hmmm. Maybe my question isn't so basic after all. Or, I'm posting in the wrong place...
