First post on this group... So ! P.L.U.R.

Cut to the case, Isa is killing me! The situation is: Have sys configuration consisting of adsl router with DHCP assigned public ip-s & using dyndns.org as Domaine2IP tracker. On Router ethernet port (external) my server is conected with 1-st NIC & 2-nd NIC is conected to switch that distributes my lan (internal).

Isa is configured using template EDGE. and default settings are a ok...

I can send/receive mail, browse internet, from internal pc- connect to intranet ftp & web site. Internal RDP is working.. So to speak everything is great.

My problem is that i CAN'T connect trough VPN. It's not woring at all.. I tryed several times using al sort's of manuals from www.isaserver.org & microsoft, step by step.. but no success.

I have tomention that on router (siemens 555) all the right port's are forwarded.

The same goes for publishing FTP server trough ISA...

One more thing RDP is also not working from the internet, but is working when i connect notebook to router's 2-nd port and try from there....

PLZ help me...

Davor G.

out of all the things I've lost, I miss my mind the most
