well ... the registry key is needed for sure if the L2TP VPN connection goes through a NAT.

Have you tried to get a new certificate to that particular machine ?

Note that depending on the certificate template used some certificates don't allow being exported ..

If you got the certificate from another machine and if the certificate is exportable make sure that during the export procedure you also export the private key.

The certificate may appear ok on the machine store but without a private key is useless.

Re: L2TP Problem

That link explains the
problem but this one gives
you the directions

<http://support.microsoft.com/kb/885407/>

Something
has changed
in SP2 for
Win XP ...

Take a look
at this link
<http://support.microsoft.com/kb/885348/en-us>

I had that
problem
and this
solved it

We
use
ISA
Server
2005
SP1
and
VPN
clients
(L2TP/IPSec).
This
configuration
works
fine
except
for
one
client
running
Windows
XP

Re: L2TP Problem

SP2
(all
others
clients
run
fine).

This
computer
always
reports
that
the
certificate
has
no
private
key
but
when
I
check
in
a
MMC
with
certificats
snap-in,
I
can
see
that
the
certificate
has
a
valid
private
key.

I
check
on
Internet
with
no
success.

Any
idea
?

Re: L2TP Problem

Thanks

Jean-Pascal

I know this article. The strange fact is only one computer doesn't work.
If I remove the registry key, the error is not the same...

I already tried all these solutions. About 10 pcs work with no problem.

Jean-Pascal

Yes...
