Hi Povl,

Did you create WPAD entries in either DHCP and/or DNS?

Thanks!

news:cc6cf183.0407130106.569860c@posting.google.com...

: I have an ISA server, which is using another proxy server as upstream

: proxy / virus scanner etc. The upstream proxy is in a DMZ and is

: listening on 10.11.12.13:3128 - and it might serve progress info to

: clients.

:

: 10.11.12.0/24 is NOT in the LAT table.

:

: When using manual configuration everything works and goes through the

: ISA server. Also works with bypass for local.

:

: With autoconfiguration (LAT table verified in WPAD.DAT) things fails.

:

: The client requestst the URL, gets an error 302 (Page has moved), and

: a new location like <http://10.11.12.13:3128/status?id=123>

:

: The problem is, in the autoconf scenario, this is sent over the

: firewall client (not in manually use proxy), and since the user does

: not have Internet access to port 3128 his connection fails.

:

: So how can I get ISA server with autoconf to make the clients send all

: HTTP web requests to the ISA web proxy, just like manual conf does ?

:
