Hello NG,

I tried to create an user-based access rule for FTP Download. Therefore I installed the Firewall Client on the PCs. But there seems to be a problem with active mode ftp in combination with the firewall client: After the "List" command the connection hangs.

Unfortunately this behavior is not appearing when I connect with the command line ftp.exe (Win XP SP2), but all other programs stop responding after the list command (Internet Explorer with Folder View, WS_FTP, Leech FTP)

Has anybody else tried this configuration?

Alex
