Hi,

Thank you for posting.

This is Lee and I am glad to meet you in the newsgroup.

Based on your description, my understanding of the issue is:

1. Only one client computer get such issue. other client computers in the SBS domain is working properly.
 2. The ISA log indicates the connetions to the web site had been passed.
- The issue is just the Internet Explorer on the problem client computer cannot show the web page corretly.

Based on these information, it appears the issue is simple a client side issue and it is not ISA server related.

If the problem is with the ISA server, all the client computers behind the issue will get the same issue.

Regarding this issue, I recommend you to post in the Internet Explorer group to check the issue further.

We recommend posting appropriately so you will get the most qualified pool of respondents, and so other partners who regularly read the newsgroups can either share their knowledge or learn from your interaction with us.

Thank you and have a nice day!

Sincerely,

Lee Li
