Thanks ...

one more thing just to be sure :

The binding order : 1. LAN NIC 2. WAN NIC

Web Server LAN NIC :

-----  
IP : from the IP range of the local network  
Gateway : nothing  
DNS : Active Directory DNS ( The same as the Local Network DNS )

Web Server WAN NIC :

-----  
IP : ISP Public IP ( Server IP )  
Gateway : ISP Gateway  
DNS : ISP DNS

Are these settings right ??

Thanks
