"Hey, I recently read Doug Adams' "Hitchhiker's guide to the galaxy" and that doesn't seem to help. Anybody knows why?"  
;-)

Look. It seems like you've got numerous difficulties with basic ISA server configuration procedures. Either you haven't read closely enough the ISA documentation/help/guides/articles or at least you understood something wrong.

Anyway, to become successful at getting help here in this newsgroup you should ask your questions more clearly, i.e. you should define the particular problem.

The best approach is the following:

- explain desired result;
- describe steps you have taken to make this work;
- show us actual results, error messages you see and any other details you think would help;

In this case you could have quick and useful response. Ask your colleagues for help with English, if you're having trouble with foreign language. And finally, you can ask your question on your native language. There are Spanish and Portuguese ISA newsgroups out there (sorry, I have no idea about the language you speak natively; this is just my guess).

Regards,  
Andrew

I follow this article

<http://www.isaserver.org/articles/2004directaccessp1.html> but It does not  
work, Does someone know why?
