I am sure that my permissions are set up correctly because I can successfully upload when I try on the server. When I try with IE at a client workstation, I receive the following message: "Details: 200 Type set to I. 227 Entering Passive Mode" as well as a couple of other lines that I don't have on hand. I have unchecked read only on all of my rules regarding FTP. Are there any other rules that I have to uncheck read only? Any other suggestions, I am sure that it is a simple fix, just don't know the answer.
