Hi Ivan,

You need to configure the host as SecureNAT to support ICMP.

HTH,

news:uwJUDc9fEHA.3024@TK2MSFTNGP10.phx.gbl...

: Hi every one, I have a rule that permits pings from the internal network to

: the perimeter and external network. In the internal network I have computer

: A configured with firewall client and no default gateway.

:

: If I ping from the internal computer A to a computer on the external network

: I get the message "destination host unreachble", but if I give computer A

: the default gateway the IP of the internal nic of ISA server then I do get

: response.

:

: As I can see the firewall client does not intercept the ping. I thought that

: all traffic goes through Firewall client if it is enabled on the client

: computer.

:

: Is this normal?

:

: Thanks a lot to every one.
