I have tried reducing the size of the cahce, the only time it I don't get the error is if its smaller than 10 gig, which is to small to be usefull for the size of my enviroment. Also when I did take it down to 10 gig, with out the error, no caching ocured. I would have a few users surf like crazy, yet not 1 item was cached. Is this an issue with server 2003 and ISA 2000?

I have implimented this design with 2000 advanced server with a 30 gig cache and no issues.
