I'm getting this error message:

Error Code: 500 Internal Server Error. The certificate chain was issued by an authority that is not trusted. (-2146893019)

When trying to access my exchange 2003 OWA from my ISA server2004 machine.

This only happens when accessing it through <https://FQDN/exchange> rather than <https://officeserver/exchange>

How can I make the authority trusted?
