Dear All,

I have a small problem with my Message Screener with my ISA 2004 SP2 installed on the member server Win2003 SP2. The message screener is filtering mail properly without any problem, however the SMTP server queue under C:\Inetpub\mailroot\Queue is getting filled with .EML messages which all seem to originate from the postmaster of the local SMTP server domain postmaster@xxxxxxx not from the remote domain that it is configured to forward the mail to, which is my Exchange server.

In addition this event log gets generated under my System Event Log:

Event Type: Warning
Event Source: smtpsvc
Event Category: None
Event ID: 4000
Date: 4/16/2007
Time: 2:06:10 PM
User: N/A
Computer: XXXX

Description:

The description for Event ID (4000) in Source (smtpsvc) cannot be found. The local computer may not have the necessary registry information or message DLL files to display messages from a remote computer. You may be able to use the /AUXSOURCE= flag to retrieve this description; see Help and Support for details. The following information is part of the event: 163data.com.cn, Unable to bind to the destination server in DNS.

..

Data:
0000: d5 02 04 c0 Õ..À

Event Type: Warning
