Hello:

I have SBS 2003 with ISA 2004. I have installed Microsoft Office Accounting 2007 on the server and intend to use multi-user access to the SQL 2005 database MSSMLBIZ.

I cannot access the database from a client PC with Office Accounting 2007. It gets the useless error "General network error encountered."

I setup a monitoring filter in ISA 2004 for all traffic coming from the client IP. For traffic to the port in use (5356) for Office Accounting I get this error, "A connection was abortively closed after one of the peers sent a RST segment."

This is apparently what is causing the Office Accounting connection problem but I have no clue why or how to fix it.

Please help.

Edwin
