greetings, i'm trying to program an app win with webbrowser to show a web site built with flash and ajax. I put the webbrowser control in a form. When I run the app show the web site but when I clic over movies flash dont do anything, it's like to lost the "on release " event of flash. I have to clic out of flash movie and back to clic to do the things well. I dont understand why happens that. Please, I need help urgently!!!

I proof with another site with flash and ajax and happens same thing... The problem only happen with webbrowser, because when I use IE to navigate , run correctly.

Thanks in advance

.
