Thanks! I created a virtual directory and changed the code to:

```
Set rs = Server.CreateObject("ADODB.Recordset")
sql = "select * from FloatTable Where ((TagIndex < 9) and (TagIndex <>
1) and (TagIndex <> 4)) And (DateAndTime>#"&StartDate&"#) And
(Minute(DateAndTime)=0) order by DateAndTime, TagIndex asc"
```

```
cst = "Provider=Microsoft.Jet.OLEDB.4.0;Data Source=" & _
      Server.MapPath("/Powerhouse/AirFlowODBC.mdb")
```

```
rs.Open sql, cst
```

and it works anonymously. Should I be concerned that Jet and Replication Objects are being deprecated?

Thanks again for the help.

Ernest
