WinXP Pro already have IIS v5.1

Open the IIS Manager in your Admin Tools Folder.
Right-click on the "Default Web Site" and choose "Properties"
On the "Web Site" tab, uncheck "Keep-Alives" enabled.

Cheers
Ken

:

: Hi,

:

: I'm using WinXP-Pro, ASP classic, IIS 5.0.

:

: I regularly get this error, but I know I am the only user accessing the
: website at the time of the error.

:

: I looked it up on the MS support webiste. Their recommendation is this

...

:

: -----

: on Microsoft Windows XP Professional, disable HTTP keep-alives in the
: properties of the Web site. When you do this, a limit of 10 concurrent
: connections still exists, but IIS does not maintain connections for
inactive
: users.

: (see full message text below)

: -----

:

: The problem is, I cant find "HTTP keep-alives" in order to disable them.

:

: Can anyone help ? Do I need to go to IIS 5.1 ? Where can I download it
: from ?

microsoft.public.inetserver.asp.db: Re: ERROR – There are too many people accessing the Web site at this time

:
: Thanks,
: PW

:
:
:
: SYMPTOMS
: When you attempt to browse an Internet Information Services (IIS) 5.0 Web
: site that is running on Microsoft Windows 2000 Professional, the following
: error message is displayed at the top of the browser:
:
: The page cannot be displayed
: There are too many people accessing the Web site at this time.
: The following error message is also displayed further down in the browser:
:
: HTTP 403.9 – Access Forbidden: Too many users are connected
: Internet Information Services
: CAUSE
: The error messages occur when more than ten users are attempting to
connect
: to IIS 5.0. The version of IIS 5.0 that is included in Windows 2000
: Professional is limited to ten connections.
: RESOLUTION
: If more than ten connections are needed, use the version of IIS 5.0 that
is
: included in Windows 2000 Server.
:
: If you use IIS 5.0 on Windows 2000 Professional or IIS 5.1 on Microsoft
: Windows XP Professional, disable HTTP keep-alives in the properties of the
: Web site. When you do this, a limit of 10 concurrent connections still
: exists, but IIS does not maintain connections for inactive users.
: STATUS
: This behavior is by design.
:
