: i "found" now security tag (it exist only if you have NTFS file system)
and
: i allowed "write" for folder that contains my database but i STILL get
this
: error message:
: Operation must use an updateable query.
:
: why?????

NTFS file system is required to set security permissions.

I disagree with the approach of using the Everyone account, from a security perspective.

Your anonymous user [IUSR_COMPUTERNAME] needs 'modify' permissions.

Your administrative account(s) need(s) 'Full' permissions.

The SYSTEM account needs 'Full' permissions.

HTH...
