-

I am using access DB.

i have a large table that i have aquired, and all the data in the fields are actually txt. unfortunately, the data is integers stored as txt. the future plan, is to redo the DB, and make the fields numeric, but for now, i need a way to retrieve data, and change it to numeric.

so if field cc_callNumbers is a 7.. but the field type is txt, in my asp page i can call that as say

```
var1 = sales_data.fields.item("cc_callNumbers").value
```

that value returns a txt 7, but i need to convert it to a number 7, so i can do math with the data. is this possible?

thanks
jeff
