it
: can know the changes in database right way. Also, we should use the
: adOpenDynamic and Server side cursor to get "fresh" data in the database.

Hi Luke...

Thanks for responding.

Are you telling me as long as I use adOpenDynamic this is not an issue? I
have heard that SQL will return control to ASP when it feels everything is
correct but may not be finished processing the data. If I think choose to
try to get the last record, it may not be available. Are you debunking
that?

Please elaborate on the server-side cursor.
