Change;

```
sqlStr = "Select * From tblusers where UID = " & Request.Form("UID") & " and PWD = " & Request.Form("PWD") & ""
```

```
' Opens the returned values from the SQL as a recordset,
' ready for iteration by ASP
// <<< LINE 53 >>> set rcSet = cnStr.Execute(sqlStr)
' validate variables against database
// If (not rcSet.BOF) and (not rcSet.EOF) then
```

```
// Check before processing
If Len(frmUsername) < 1 Then frmUsername = "NULL"
If Len(frmPassword) < 1 Then frmPassword = "NULL"
```

To;

```
// Check before processing
If Len(frmUsername) < 1 Then frmUsername = "NULL"
If Len(frmPassword) < 1 Then frmPassword = "NULL"
Response.Write "<b><i>DEBUG</i><br>Username: " & frmUID & "<br>Password: " & frmPWD
sqlStr = "Select * From tblusers where UID = " & frmUID & " and PWD = " & frmPWD & ""
```

```
' Opens the returned values from the SQL as a recordset,
' ready for iteration by ASP
// <<< LINE 53 >>> set rcSet = cnStr.Execute(sqlStr)
' validate variables against database
// If (not rcSet.BOF) and (not rcSet.EOF) then
```

Re: Validate logins with ASP, MS Access and Cookies error

Keeping it FREE!

I am now presented with incorrect Username and/or Password. I have double checked this.

I now have the following code in my page

```
<% @ Language="VBScript"%>

<!-- METADATA TYPE="typelib" FILE="C:\Program Files\Common
Files\System\ado\msado15.dll" -->
<!-- #include file="Connectionstring.asp" -->
<%
' //////////////////////////////////////
' login validation script
' © Matt Millross
' www.designplace.org
' free for use as long as copyright notice left intact
' For more scripts, visit www.designplace.org
' //////////////////////////////////////

' variables
dim cnStr, rcSet, frmUID, frmPWD, sqlStr

'store form input into variables
frmUID = Request.Form("UID")
frmPWD = Request.Form("PWD")

'create connection and recordset objects
Set cnStr = Server.CreateObject("ADODB.Connection")
'// THIS IS NOT NEEDED!
'// Set rcSet = Server.CreateObject("ADODB.Recordset")

' defining database connection (connectionstring.asp)
cnStr.ConnectionString = path
cnStr.Provider = provider
cnStr.open

' execute sql and open as recordset
'// sqlStr = "Select * From tblusers where username = " _
'// & Request.Form("UID") & " and password = " & Request.Form("PWD") &
'// ""
'// You've already stored the user/pass into a local var – use them!
'// and NEVER use "Select * ..."
'//
'// http://aspfaq.com/show.asp?id=2096
```

Re: Validate logins with ASP, MS Access and Cookies error

```
sqlStr = "Select * From tblusers where UID = " & Request.Form("UID") & " and PWD = " & Request.Form("PWD") & ""
' Opens the returned values from the SQL as a recordset,
' ready for iteration by ASP
// <<< LINE 53 >>> set rcSet = cnStr.Execute(sqlStr)
' validate variables against database
// If (not rcSet.BOF) and (not rcSet.EOF) then

// Check before processing
If Len(frmUsername) < 1 Then frmUsername = "NULL"
If Len(frmPassword) < 1 Then frmPassword = "NULL"
// Then go...
Set rcSet = cnStr.Execute(sqlStr)

If NOT rcSet.EOF Then
response.cookies("validated_user") = frmUID
response.write "<h1>Login successful!</h1>"
// Forget using rcSet.Fields, and just use rcSet
// directly
response.write "<p>Welcome " & rcSet(1) & "</p>"
else
response.write "incorrect Username and/or Password"
end if

// Don't forget to cleanup after yourself
cnStr.Close: Set cnStr = Nothing
Set rcSet = Nothing
%>
```

UID and PWD are the 2 fields in my database that hold the information.

I have now changed the code

malcolm wrote:

Hi, while trying to validate username and password on login form I am presented with the following error message

Re: Validate logins with ASP, MS Access and Cookies error

Microsoft JET Database Engine error
'80040e10'

No value given for one or more required
parameters.

/vdateUsr.asp, line 53

The 2 fields within the database are text
fields (UID) and (PWD) these
are
spelt correctly!

<snip>

```
sqlStr = "Select * From tblusers where  
username = " & Request.Form("UID") & " and password  
= " & Request.Form("PWD")
```

&

""

No – they're not spelt correctly. In your SQL statement you
refer to
two fields called username and password, yet you said they
are called
UID and PWD. Which is correct?
