Thanks Daniel.

Really appreciate it and your hint made my day.
It all worked with Pivot tables and was after all so easy to print out.

i am new to asp/sql and of course, i have some problems with it.

please let me explain:
i have a problem with a sql result and its output in asp

my sql result table looks like this

there are 3 fix payment options I want to show always: Visa, Mastercard
and AMEX.

I would like to output this result table shown before as followed in
asp:

First sorted by city, then date, and then always followed by 3 fixed
columns for the payment types

City1 Visa Mastercard Amex

1/1/2007	123.32	23.30	40.30
1/2/2007	-	12.30	234.20

Re: asp/sql looping problem

I tried it with looping while checking if date and city changed.
however, every time i try it, i can't show it properly like the way i
want it.

Please, can somebody help?

If you need more information, please let me know.
thank you so much.

Look up "pivot" for the database system you are using, and it should give
you a start. What you want is a pivot table based on city+date, with payment
type as the column, and then you should find your loop much easier to
program.

Dan
