Hi Bob

Your code is a bit "hi tec" at least for me...

Im not sure it serve my purpose. But i have problem following exactly what you are doing.

Let me explain more in detail.

My site are a place for people to meet. Dating and soo on.

1) When people get to my page they start a session..right? This is done automatic. i dont care about these people. They are not on any list because they are not logged in.

2) Members who are logged in to my site i want to display on a list. Like this:

Logged in

peter

mike

..

..

3) When my members logg in to my site i check in the database if all is ok (username, password) then i set session("memberId") and session("username")

But... what can i do to display all inlogged members. Do i have to use the Application collection? How do i add people and how do i delete people when they leve my site?

Hope u understand what im trying to say here :-)

Regards Mikael
