this source code form a shopping-cart, I'm confuseing on the array of "arrCart", is it a table? a multidimensional array seems like a table from the view of data structure?

add a new record to a array is so simple:?

```
arrCart(cProductid,scartItem) = lngcatalogID
```

in ASP, the declaration of declare a multidimensionl array is same to a variety? don't need to care about the amount of element?

```
Dim arrCart
```

```
arrCart(cProductid,scartItem) = lngcatalogID
```

could consider that "cProductid" and "scartItem" as a field?

maybe my word have confused you, wish you could know my question :-)

```
<%
```

```
*****CartAddItem
```

```
dim mycolor
```

```
Sub CartAddItem(id, rc)
```

```
    ' Return 0 if added, 4 if product does not exist
```

```
    ' Get from datbase and add to instorage array
```

```
    dim scartitem
```

```
    Dim arrCart
```

```
    Dim TotalOptionPrice
```

```
    Dim Optionname
```

```
    CartGetProduct Id, rc
```

```
    if rc = 0 then
```

```
        arrCart = Session("MyCart")
```

```
        scartItem = Session("cartItem")
```

```
        scartitem=scartitem+1
```

```
        Session("cartItem")=scartitem
```

```
        arrCart(cProductid,scartItem) = lngcatalogID
```

```
        arrCart(cProductCode,scartItem) = strcode
```

```
        arrCart(cProductname,scartItem) = strname
```

```
        If isnumeric(quantity) then
```

```
            arrCart(cQuantity,scartItem) = CInt(quantity)
```

```
        else
```

```
            arrCart(cQuantity,scartItem) = 1
```

```
        end if
```

```
        arrCart(cUnitPrice,scartItem) = curCprice +
```

microsoft.public.inetserver.asp.general: Are arrCart here is a Table?

```
TotaloptionPrice
    Session("MyCart")=arrCart
end if
end sub
%>
```

I'm sorry my english is so poor,  
so forgive me if my word had make you uncomfortable.  
I'll try my best to express my question correctly
