I've had this problem as well, luckily you have direct access to the server where I did not. So , when this happens, I delete the file, open it up the web browser and force the 404 Page not found error, then I do a Save As and save the file as the same name refresh the browser and see if that works. I know its kind of a hack but it seems to work more often than not when I dont have direct access to the server. Good luck.
