Actually you have more than one error. FSO expects a physical path, not virtual. You need Server.MapPath and my first suggestion. I just tried this and it works. Just change the name of your folders. I'm using "/images"

```
<% @ Language=VBScript %>
```

```
<%
```

```
Option Explicit
```

```
Response.Buffer = True
```

```
Dim objFSO
```

```
Set objFSO = Server.CreateObject("Scripting.FileSystemObject")
```

```
Dim objFolder
```

```
Dim strCurrentFolder
```

```
strCurrentFolder = Server.MapPath("/images")
```

```
Set objFolder = objFSO.GetFolder(strCurrentFolder)
```

```
Dim objFile
```

```
For Each objFile in objFolder.Files
```

```
Response.Write objFile.Name & " (" & objFile.Size & "bytes)<br>"
```

```
Next
```

```
Set objFSO = Nothing
```

```
Set objFolder = Nothing
```
