Hi Paul

I managed to make it work on my intranet but it still doesn't work on the internet.

The error message is: "Could not login to the FTP server with the user name and password specified"

In the ftp service log file it doesn't log anything when I'm trying to access it from the internet, it does however log when I try to login from the intranet.

I'm aware that there might be several things that goes wrong, the ADSL modem, the SBS2003 built in firewall and maybe other things.

How do you suggest I troubleshoot this issue?

Thanks

Elie Grouchko
