It sounds like CuteFtp is not set up to make data connections in passive mode.

Perhaps it would be a good idea to distinguish between whether you're using active mode or passive mode.

Command-line FTP always uses active mode, and has the advantage that if you run it with "ftp -d yoursite.example.com", it will tell you what commands are being sent, and what the responses are. Start with that, and see whether you still have problems.

Then, if you need passive mode support as well, try it with an FTP client that allows you to see the commands sent and the responses received.

Alun.
